

Network Management & Monitoring

POWERED BY AUVIK

A deep understanding of your network

In minutes, Auvik gives us:

- A complete and accurate map of your network, including gear that's been hidden away or forgotten and all sorts of rogue devices (IoT, IP cameras, unmanaged switches, etc.). No device left behind!
- A complete profile for every device, including make, model, serial number, firmware version, and other key data.
- Details on how everything on your network is connected and configured across all of your locations.
- A list of all the IP addresses you're currently using and which devices are using them.

All of this data and visualization is maintained in real-time so if we ever need to troubleshoot, we know exactly what we're dealing with.

Vigilant monitoring of your network

As soon as it powers on, Auvik:

- Implements 24/7 monitoring and alerting tuned to network best practices.
- Tracks usage and health statistics on your network, which we can see in real-time.
- Starts building and storing historical performance data, which we can use for analysis, troubleshooting, and forecasting.

With the data we get from Auvik, we'll always have a finger on the pulse of your IT environment.

Quick resolution of network issues

Always on and always connected, Auvik allows us to:

- Instantly tap into network evidence to isolate issues in minutes instead of hours.
- Expertly analyze device configurations so we can make informed recommendations for keeping your network running smoothly.
- Automatically capture and monitor network device configurations and make backups whenever there's a change.
- Instantly restore any configuration from your version history.

With Auvik's powerful troubleshooting and configuration management capabilities, we're able to resolve problems fast and improve the stability of your network. And we'll never miss a network device backup. Ever.

Answers to the what, who, and where of network traffic

With Auvik TrafficInsights™, we can see all traffic flows on your network to:

- Determine *what* applications are being used on the network, so we can find out if banned applications like BitTorrent are being used.
- Show *who* is using those applications, so we can find out who's hogging all your bandwidth and slowing the network down.
- Pinpoint *where* data is going, so we can warn you if suspicious traffic is being sent to high-risk regions.

We can break down traffic by sources, destinations, and applications. So if you're looking for that one employee who's doing something they shouldn't be doing, we can quickly get your hands on that level of detail.

Off-site management

With Auvik, we can also:

- Securely manage your network devices from anywhere directly from our Auvik dashboard.
- Manage network device credentials safely so they'll never be lost or exposed.

Simply put, you deserve the very best. That's why we use Auvik.

Questions?

Let's talk. Better yet, let us show you what we can do with Auvik.
