

Great visibility and effortless setup

How Auvik saves time and boosts
confidence across a small IT team

“Its interface is pretty intuitive”

Key points

- Auvik enables quick switch replacements through seamless backup restoration
- The intuitive interface and network map make it easy to visualize the entire network
- Dramatically reduces time spent on setup, maintenance, and troubleshooting
- Empowers junior technicians to solve issues independently
- Fast time-to-value, with noticeable benefits shortly after implementation
- Reliable performance with no stability concerns

What is your primary use case?

We're using Auvik right now for switch backups and general network monitoring.

What is most valuable about Auvik?

The switch backups are great. If a switch goes down or gets fried, we can just plug in a new switch and be good to go.

Its interface is pretty intuitive. The network map on the main dashboard offers general topography. While I have in my head where everything is, it's nice to have a visual reminder.

The solution is easy to use. It gives you full net visibility. You can dig pretty deep in, and it'll show everything—from server to switches to access points.

We realized the value of the solution pretty fast. We already had it and brought it back because we knew what we needed. It helps with use cases and allows entry-level technicians to solve more tickets on their own. We're a two-person team, so that's significant.

Overall, it's pretty straightforward. We spend less time on setup and maintenance. If we need to replace a switch, we can just copy the configuration—and that saves a lot of time.

We realized the value of the solution pretty fast. We already had it and brought it back because we knew what we needed.”

How long have you used Auvik?

We had the solution a year or two ago, then ended our subscription. About three or four months ago, we resubscribed. We had a change of staff at the time and didn't see the value—then realized it offered features we needed.

The solution is easy to use. It gives you full net visibility.”

What do you think about the stability of Auvik?

I have never had any issues with Auvik even being slow. It's always been very responsive for me.

What do you think about the scalability of Auvik?

The solution should scale well. If we added another store, it would be pretty straightforward.

Which solution did you use previously and why did you switch?

We didn't have a direct competitor to Auvik. We do have Cisco, which has some similar functionalities.

How was the initial setup?

I did the initial setup with the team. I went and installed it on a few switches and enabled DHCP and SSH. The implementation was pretty straightforward. The setup took around 30 minutes to an hour.

We do not have to handle any maintenance. We get the alerts and deal with those directly.

Any final thoughts about Auvik?

I'd rate the solution a solid nine out of ten. I'd advise users to be prepared to go into all network devices and make sure they are talking to Auvik and reporting back. Just make sure you're spending a few hours getting it all setup.
